EXPERIENCE

AVSystem · Software Engineer, Good Lood team 07/2025 - Present

- Work across a Good Lood ecosystem of roughly eight systems, from a React Native app with 500,000+ registered users to point of sale handling millions of transactions a year.
- Move between mobile, backend, and internal tooling rather than owning one service, on a team small enough that nobody specializes.
- Joined as a summer intern and moved into a full engineering role.

Java · Spring · MongoDB · TypeScript · React · React Native · Electron · Ruby on Rails · Django · PostgreSQL

SpotOn · Software Engineer Intern 07/2024 - 09/2024

- Designed and built a backend service in Go and gRPC, including a MongoDB migration.
- Set up CI/CD pipelines with GitHub Actions.
- Migrated a front end onto the company design system and fixed UX defects in TypeScript, React, and SCSS.

Go · MongoDB · TypeScript · React · Sass

SHIPPED & MAINTAINED

Studenckie Koła Naukowe AGH · Webmaster and content editor 01/2024 - Present

- Maintain the Gatsby and React site for the AGH body coordinating student scientific associations, with Contentful behind it.
- Modernizing it for long-term maintainability so it survives handover after I graduate.
- Edit content and work directly with scientific circles.

Gatsby · React · JavaScript · Sass · Bootstrap

AGH Code Industry · Web developer 10/2023 - Present

- Build and maintain the association's Next.js and React site alongside the rest of the web team.

Next.js · React · TypeScript · Sass

UXberries · Developer

- Built the association's site in Astro with React islands, focused on staying maintainable as members rotate through.

Astro · React · TypeScript · Tailwind CSS

BUILT FOR MYSELF

cinelog · instead of Trakt

Tracks films and series I have watched, with a watchlist, a watch queue, ratings, and stats and recaps over time.

TypeScript · Turborepo · Next.js · React Native · Expo · tRPC · Hono · Drizzle · PostgreSQL · Tailwind CSS

fridgelist

Keeps a stocktake of what is actually in my fridge. Receipts from Biedronka import as JSON, things I buy often get saved as regulars, and I tick items off as I finish them. Once stock runs low it builds the shopping list on its own.

TypeScript · React Native · Expo · Zustand

macrolog · instead of Fitatu

Tracks calories, protein, fat, and carbs per day. Products are added by scanning an EAN barcode with the camera against an open products database. When something is not in there, I create the product or the dish by hand and enter its macros.

TypeScript · React Native · Expo · Zustand

EDUCATION

AGH University of Kraków · Informatyka Techniczna

- Engineer's degree (inż.) completed. Master's degree in progress.

INTERESTS

JDM cars, piano and trumpet, the gym, video games, films and series, travel, and photography lately. Several of them end up as something I build.
